

Project Summary

Alabama Biofuels Workshops – Alabama Clean Fuels Coalition

The Alabama Clean Fuels Coalition (ACFC) will market and conduct three regional biofuel workshops to be held in the summer of 2008. The workshops will be located at three junior college locations in the north, central, and southern areas of the state to educate potential users and stakeholders on biofuel 'best management practices' to ensure that high fuel quality and distribution standards are met. Activities will include on-site demonstrations of the nature and use of biofuels: quality comparisons, equipment used in the retail distribution of fuels, flex fuel vehicles, and more.
